

Classroom Walkthroughs & Student Observations

Use eWalk® to turn walkthroughs and student observations into data you can use to improve student achievement.

Visiting classrooms, observing students and making mental notes are sound management practices. Turning those walkthroughs and informal observations into data that you can use, helps you make decisions based on data.

eWalk® from Media-X Systems, is an easy-to-use data system to collect, analyze and store data. It is currently being used by hundreds of districts in the US and elsewhere.

With eWalk®, you can collect data directly through web-based forms or download a data collection template to your handheld or desktop. Once downloaded, you can quickly record observations using various input elements including pull-downs, checkboxes, numeric entry, text entry, timers/counters and rubrics.

When you are done, the results are uploaded to the web for printing and instant data analysis. You can attach custom forms or export the data in a standard format for use in Excel, FileMaker and many programs.

eWalk® includes a variety of built-in statistical reports, including cross tabulations, comparisons, etc. Each data element is presented numerically and visually. For greater control, Media-X can provide eWalk® statistical reports customized for your organization.
